

Aim: To understand Static Analysis SAST process and learn to integrate Jenkins SAST to SonarQube/GitLab.

1. Open up Jenkins Dashboard on localhost, port 8080 or whichever port it is at for you.

The screenshot shows the Jenkins Dashboard. On the left is a sidebar with navigation links: New Item, Build History, Project Relationship, Check File Fingerprint, Manage Jenkins, and My Views. The main area displays a table of builds. The table has columns for status (S), icon (W), name, last success, last failure, and last duration. There are four builds listed: My_First_Maven, MyPipeline1, Pipeline_01, and WebTestDriver. Below the table, there are sections for 'Build Queue' (showing no builds) and 'Build Executor Status' (showing 0/2 executors).

S	W	Name	Last Success	Last Failure	Last Duration
✓	☁	My_First_Maven	23 days #2	23 days #1	20 sec
✓	☀	MyPipeline1	28 days #1	N/A	9.2 sec
✓	☀	Pipeline_01	1 mo 15 days #3	N/A	9.9 sec
✓	🚗	WebTestDriver	1 day 16 hr #5	1 day 16 hr #4	13 sec

2. Run SonarQube in a Docker container using this command :-
a) `docker -v`
b) `docker pull sonarqube`
c) `docker run -d --name sonarqube -e SONAR_ES_BOOTSTRAP_CHECKS_DISABLE=true -p 9000:9000 sonarqube:latest`

```
PS C:\Users\lauki> docker pull sonarqube
Using default tag: latest
latest: Pulling from library/sonarqube
bd819c9b5ead: Download complete
80338217a4ab: Download complete
1a5fd5c7e184: Download complete
4f4fb700ef54: Download complete
7b87d6fa783d: Downloading [=====>
7478e0ac0f23: Download complete
90a925ab929a: Download complete
7d9a34308537: Download complete
```

3. Once the container is up and running, you can check the status of SonarQube at **localhost port 9000**. The login id is “**admin**” and the password is “**aditya**”.

Set up project for Clean as You Code

The new code definition sets which part of your code will be considered new code. This helps you focus attention on the most recent changes to your project, enabling you to follow the Clean as You Code methodology. Learn more: [Defining New Code](#)

Choose the baseline for new code for this project

☒ Use the global setting

Previous version

Any code that has changed since the previous version is considered new code.

Recommended for projects following regular versions or releases.

☐ Define a specific setting for this project

5. Setup the project and come back to Jenkins Dashboard. Go to **Manage Jenkins** → **Plugins** and search for **SonarQube Scanner** in **Available Plugins** and install it.

[Install](#)

[/](#)

Install	Name ↓	Released
<input checked="" type="checkbox"/>	SonarQube Scanner 2.17.2 External Site/Tool Integrations Build Reports This plugin allows an easy integration of SonarQube , the open source platform for Continuous Inspection of code quality.	7 mo 9 days ago

6. Under '**Manage Jenkins** → **System**', look for **SonarQube Servers** and enter these details.

Name : sonarqube

Server URL : http://localhost:9000

Install from Maven Central

Version

Add Installer ▾

8. After the configuration, create a **New Item** in Jenkins, choose a **freestyle project** named **sonarqube**.

Jenkins Search (CTRL+K) Aditya Nagesh Raorane log out

Dashboard > All > New Item

New Item

Enter an item name

Select an item type

- Freestyle project**
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.
- Maven project**
Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.
- Pipeline**
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- Multi-configuration project**
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
- Folder**
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a

OK

9. Choose this GitHub repository in **Source Code Management**.

https://github.com/shazforiot/MSBuild_firstproject.git

It is a sample hello-world project with no vulnerabilities and issues, just to test the integration.

The screenshot shows the SonarQube Configuration page. The left sidebar has a 'Configure' section with options: General, Source Code Management (selected), Build Triggers, Build Environment, Build Steps, and Post-build Actions. The main area is titled 'Source Code Management' and has two radio buttons: 'None' and 'Git' (selected). Below the 'Git' option is a 'Repositories' section with a text input for 'Repository URL' containing 'https://github.com/shazforiot/MSBuild_firstproject.git'. There is a 'Credentials' dropdown menu set to 'none' and an '+ Add' button. Below that is an 'Advanced' dropdown. At the bottom of the configuration area are 'Add Repository' and 'Branches to build' sections. At the very bottom are 'Save' and 'Apply' buttons.

10. Under **Build-> Execute SonarQube Scanner**, enter these **Analysis Properties**. Mention the SonarQube Project Key, Login, Password, Source path and Host URL.

sonar.projectKey=sonarqube

sonar.login=admin

sonar.password=aditya

sonar.sources=.

sonar.host.url=http://localhost:9000

Analysis properties ?

```
sonar.projectKey=sonarqube
sonar.login=admin
sonar.password=laukik
sonar.sources=.
sonar.host.url=http://localhost:9000
```

Additional arguments ?

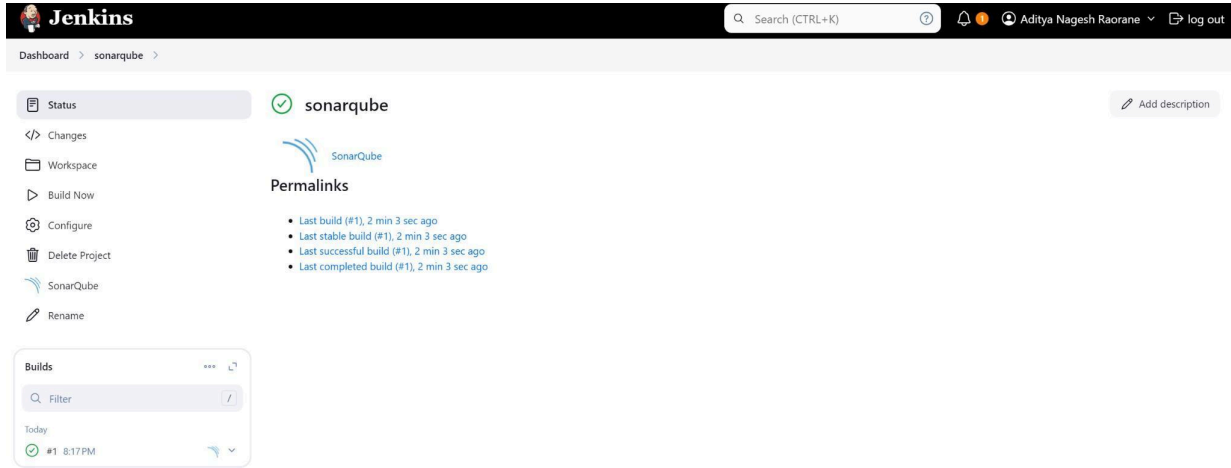

11. Go to <http://localhost:9000/admin/permissions> and allow Execute Permissions to the Admin user.

The screenshot shows the SonarQube Administration interface. The top navigation bar includes 'sonarqube' logo and links for Projects, Issues, Rules, Quality Profiles, Quality Gates, Administration, and More. The 'Administration' section is active, with sub-links for Configuration, Security, Projects, System, and Marketplace. The 'Global Permissions' page is displayed, showing a table of permissions for different user groups. The table has columns for 'All', 'Users', 'Groups', a search bar, and specific permissions: 'Administer System', 'Administer', 'Execute Analysis', and 'Create'. The 'sonar-administrators' group has 'Administer System' checked and 'Administer' checked for 'Quality Gates' and 'Quality Profiles'. The 'sonar-users' group has 'Administer' checked for 'Quality Gates' and 'Quality Profiles'. The 'Anyone' group has 'Administer' checked for 'Quality Gates' and 'Quality Profiles'. The 'Administrator' user has 'Administer System' checked and 'Administer' checked for 'Quality Gates' and 'Quality Profiles'. The 'Create' column shows 'Projects' checked for all groups.

	Administer System ?	Administer ?	Execute Analysis ?	Create ?
sonar-administrators System administrators	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> Quality Gates <input checked="" type="checkbox"/> Quality Profiles	<input type="checkbox"/>	<input checked="" type="checkbox"/> Projects
sonar-users Every authenticated user automatically belongs to this group	<input type="checkbox"/>	<input type="checkbox"/> Quality Gates <input type="checkbox"/> Quality Profiles	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> Projects
Anyone DEPRECATED Anybody who browses the application belongs to this group. If authentication is not enforced, assigned permissions also apply to non-authenticated users.	<input type="checkbox"/>	<input type="checkbox"/> Quality Gates <input type="checkbox"/> Quality Profiles	<input type="checkbox"/>	<input type="checkbox"/> Projects
A Administrator admin	<input checked="" type="checkbox"/>	<input type="checkbox"/> Quality Gates <input type="checkbox"/> Quality Profiles	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> Projects

12. Run The **Build** and check the **console output**.

The Jenkins dashboard for the 'sonarqube' job shows a green status icon and a list of build history links. The 'Builds' section on the left shows a single build (#1) at 8:17 PM.

In this way, we have integrated Jenkins with SonarQube for SAST.

Conclusion:

In this experiment, we have understood the importance of SAST and have successfully integrated Jenkins with SonarQube for Static Analysis and Code Testing.
